

FACT SHEET

NOACNE LIPOSOMAL TRI-ACTIVE SYSTEM

PRODUCT OVERVIEW

It is advanced technology that combines three active ingredients: Salicylic acid (SA), Glycolic acid (GA), and Lauric acid (LA) encapsulated within a liposomal delivery. This technology merges the synergistic action of these potent ingredients with nanotechnology-based delivery, targeting the main causes of acne while minimizing irritation.

FEATURES AND KINETICS

- Hydrating matrix with 80-95% water
- Close adhesion to stratum corneum
- Enhances epidermal moisture balance
- Breathable, non-occlusive film

MECHANISM OF ACTION

1. Enhanced delivery: Liposomal bilayer integrates with skin lipids for efficient transport of actives.
2. Pore & renewal action: Salicylic acid clears follicles while glycolic acid promotes controlled exfoliation.
3. Antimicrobial defense: Lauric acid disrupts Cutibacterium acnes membranes to reduce bacterial growth.

KEY INGREDIENTS

- Liposomal Salicylic acid
- Liposomal Glycolic acid
- Liposomal Lauric acid

STORAGE CONDITIONS:

- Store at room temperature, protected from light and heat.
- Do not freeze, as freezing may disrupt liposome integrity.
- Keep in tightly sealed containers to avoid water loss.

APPLICATIONS

- Rapid skin absorption & enhanced penetration
- Controlled release with long-lasting action
- Targeted delivery to follicles and acne sites
- Multi-action therapy: exfoliating, antimicrobial, and anti-inflammatory
